Specification for IBAA Fill sand

Material: IBAA Fill sand

Size Fraction: 0/4mm

Constituents: IBA Ash, Brick, Concrete, Rock, Stone, glass, sand etc, may contain trace metals (typically <1%).

Gradings/specifications available for Fill sand IBAA:

- Grading
- Asbestos Screening
- Chemical analysis

If you have any questions or require any other information, please do not hesitate to the sales office on 01159 213454 or email: sales@johnsonsaggregates.com

Regulatory standards for IBAA Material

IBAA material fully conforms with the applicable SHW requirements for a Manufactured Aggregate
SHW 600 Earthworks - Manufactured /Secondary IBA Aggregates
RPS 206: Using unbound municipal IBAA in construction activities (Updated 22 January 2019)
This regulatory position statement (RPS) applies if you use unbound municipal incinerator bottom ash aggregate (IBAA) in certain construction activities. It also covers the storage of the IBAA that relates to its use.
Unbound IBAA includes IBAA in hydraulically bound mixtures (HBMs). A HBM is where the IBAA is mixed with water and a binder such as cement to form a mixture which then sets.
Processed for use in:

- **Building a road sub-base**
- **Building a construction or structural platform**
- **Pipe bedding**

Restrictions on amounts apply see RPS 206 for details

RPS 017 The Regulation of Materials under Consideration for an End-of-Waste Quality Protocol
Annex 2 - Waste streams to which this position applies
Annex 2 sets out the requirements for each of the waste streams to which this position applies:

- incinerator bottom ash aggregate (IBAA).

Final use - Incinerator bottom ash aggregate (IBAA)
Processed for use in:

- unbound applications e.g. replacement aggregates in culverts, bridge abutments and as fill beneath ground-bearing slabs, sub-base and capping layers

The amount of IBAA you can use depends on the distance to a surface water body as shown in the following table.

Distance to water body (metres)	Maximum tonnage (tonnes)	Volume after compaction assuming 1.7T/m3 (m3)	Maximum surface area of a structural platform (m2)
25-50	4,420	2,600	2,600
50-100	6,800	4,000	4,000
100-150	13,600	8,000	8,000
150-200	20,400	12,000	12,000
200-250	27,200	16,000	16,000
250-300	34,000	20,000	20,000
300-350	40,800	24,000	24,000
350-400	47,600	28,000	28,000
400-450	54,400	32,000	32,000
450-500	61,200	36,000	36,000
More than 500	68,000	40,000	40,000

Material characterisation

All JAR Material fully complies with BS EN 12457:2002 Leachate limits for waste materials.

BS EN 12457-2:2002

Characterisation of waste. Leaching. Compliance test for leaching of granular waste materials and sludges. One stage batch test at a liquid to solid ratio of 10 l/kg for materials with particle size below 4 mm (without or with size reduction)

BS EN 12457-4:2002

Characterisation of waste. Leaching. Compliance test for leaching of granular waste materials and sludges. One stage batch test at a liquid to solid ratio of 10 l/kg for materials with particle size below 10 mm (without or with size reduction)

Determinand		BS EN 12457 mg/Kg
Arsenic	As	2
Barium	Ba	100
